

Territorial Scale: The proposal tends to create a link to all the systems that exist in the territory, the city, the water, and the jungle; by a series of travel around such as by train, by boats and walking.

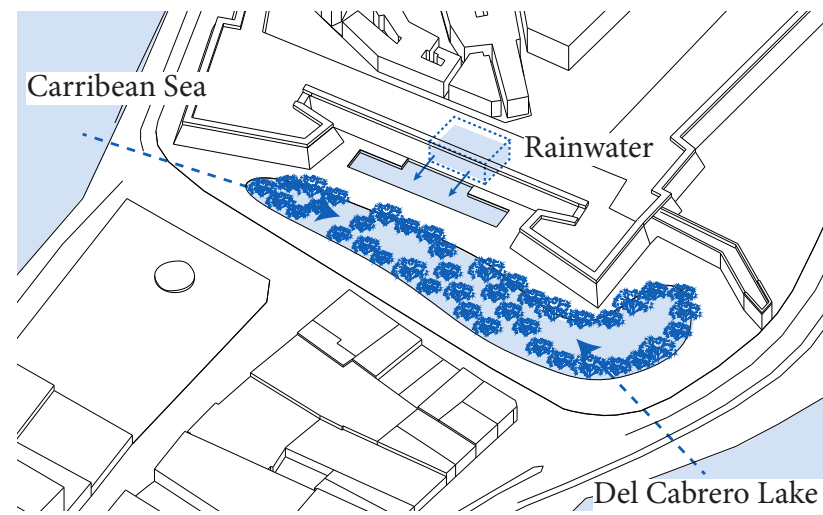

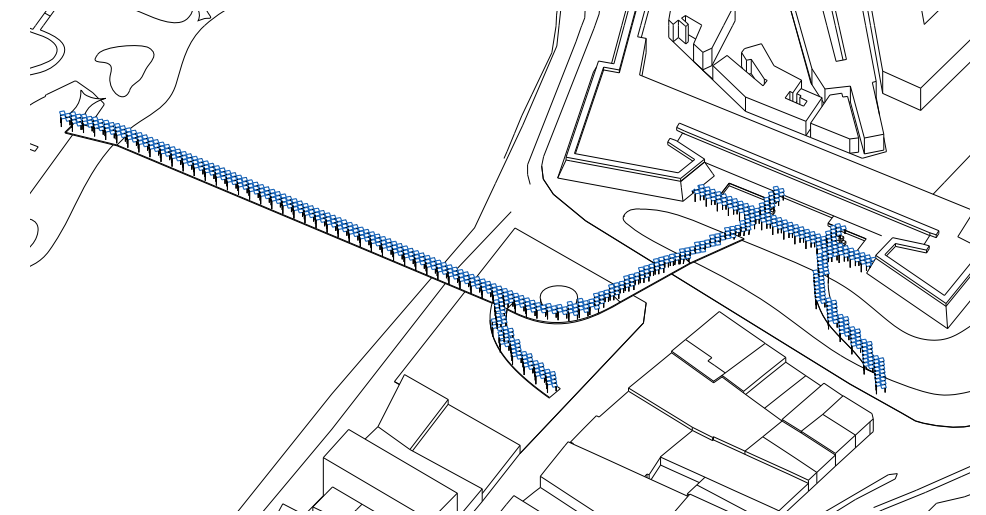

Urban Scale: a connection between the old city and the new one. It tends to destroy the barrier between places and generate an artificial ecosystem such as the help of growing mangroves along coast. The design is implementing into a larger scale, extending outwards from the old city.

connection of the new and old city

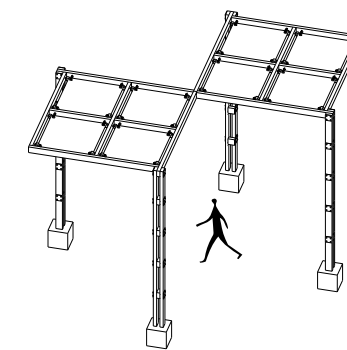

connection of water system

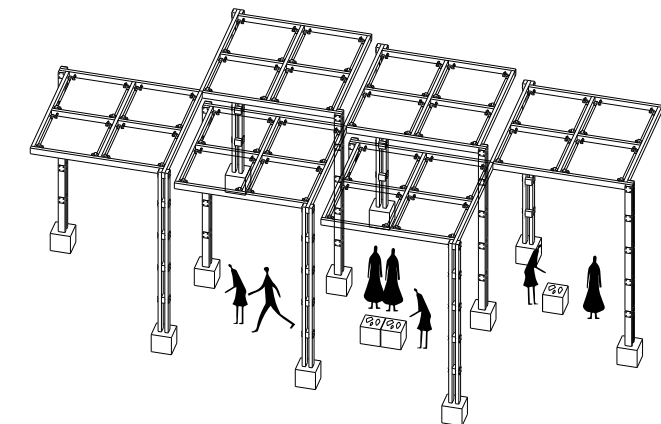

canopy structure over walkway and bridges

single module walkway

multiple modules various activities

Architecture Scale: A fisher's market that float on water. It adapts to the sea level rises. The module of the floating platform can combine and become a fisherman community. The material for the roof is Marga Palm leaf.
